## Report on Waste Water Recycling

Water is very necessary ingredient of life and existence of human being and nature. The recycling of the water increases the underground water level and reuse of water. Our institution has adopted practice of recycling of wastewater. Institution has RO drinking water plant and the wastewater of RO plant is used for garden and recharging the ground water.

While using RO water, water spilt in basin and water wasted in the process of purification, is transported through pipeline to garden and it is used for the plants.

MCVC lab of the college has washbasins, in which wastewater of the cookery, bakery practical is collected and with the help of pipeline, and such water is used for the purpose of garden.

Institution adopted the wastewater recycling method or reuse of water for the conservation of nature and increase the water level in the campus.
